Editor's Notes

The following list of references has been compiled from various sources on the Web, including several search services, specialized databases, and journal and author homepages. If you note inaccuracies or omissions, please let me know and the correct version will appear in the next number of *MONOCULUS*. Grateful thanks to the donors of reprints to the Monoculus and Wilson libraries.

The year of publication as given refers to the year in which the printed version of the journal was distributed, and not the year when it first became available online, if these are different.

Bazartseren Boldgiv, Cristina de O. Dias, Susan Dippenaar, Frank Fiers, Santiago Gavíria-Melo, Clyde Goulden, Rony Huys, Brian Jones, Sérgio Leandro, Pedro Martínez-Arbizu, Iskandar Mirabdullayev, Jens Christian

Nejstgaard, Tanja Pipan, Sabine Schultes, Hege Vestheim, and Nina A. Ziminova graciously provided literature references and, in some cases, reprints. Other colleagues have already donated reprints of articles which were listed in previous numbers, to the Monoculus Library.

Special congratulations to Sabine Schultes for the publication of the first paper from her Ph.D. Thesis (Schultes et al., 2006)!

Translations of titles in languages other than English (if not given by the source) are provided by the management.

Recommended Reading

Tibor Farkas: 1929 - 2003

By Istvan Csengeri and John E. Halver

2006. A Biographical Memoir. National Academy of Sciences, Washington, D.C. 27 pp.

<http://newton.nap.edu/html/biomems/TFarkas.pdf>

The Hungarian scientist Tibor Farkas specialized in lipid biochemistry and physiology. His early work on the gross nutrient and energy content of planktonic crustaceans, done at the Biological Research Institute at Tihany, led to more-sophisticated studies in collaboration with Sándor Heródek, on fatty acid composition and further work on freshwater and marine copepods, cladocerans, crayfish, and gammarids. Their investigations contributed significantly to understanding the role of lipids in the mechanism of temperature adaptation.

Subsequent studies of the regulation of fatty acid mobilization and membrane receptors in fishes and amphibians led to examination of the role of fish oils in mammals, including humans: cholesterol regulation, brain function, cold adaptation, and other aspects. These studies strongly influenced the development of research on fatty acid metabolism in general, and the role of specific fatty acids in brain structure and functions.

Authors Csengeri and Halver trace Dr. Farkas' personal and professional life with clarity and obvious affection. For copepodologists, this is an inspiring story illustrating the unpredictable paths where work on our favorite crustaceans may lead.

— Jan Reid

Plea for Reprints

Please send reprints of your articles to the Monoculus-Library and to the C. B. Wilson Copepod Library!
Both paper copies and pdf files are welcome.

To the **Monoculus-Library**:

C/o Prof. Dr. P. Martínez Arbizu
Forschungsinstitut Senckenberg
DZMB-Forschungsinstitut Senckenberg
Monoculus-Library
Suedstrand 44

Recent Publications on Copepoda

Compiled by Chad Walter
(National Museum of Natural History, Washington,
D.C., U.S.A.) and Jan Reid

Older publications that were recently listed in the “World of Copepoda” bibliographic database (C. B. Wilson Library) are included. Please advise us if you learn of publications (including theses and “gray literature”), on any aspect of the Copepoda, that are not held in the Monoculus Library or listed in the “World of Copepoda” database.
